

Dear friends of artificial intelligence,

We live in a time where technology is evolving at a rapid pace, disrupting both our daily lives and our future. Artificial intelligence (AI) is at the heart of this revolution, transforming industries, creating new opportunities while solving problems that humanity has faced for decades. However, these technological advancements also raise ethical questions and important challenges.

We, the members of MANIFEST AI, are committed to ethical and beneficial AI to humanity. We are committed to promoting responsible, moral, and human-centered artificial intelligence. We write this manifesto to rally all those who believe in the power of AI to improve our lives, while preserving our humanity and ensuring a sustainable and equitable future for all.

## **AI in the service of humanity**

We place humans at the heart of our concerns.

We are dedicated to designing, developing, and deploying AI solutions that improve quality of life, reduce inequalities, and strengthen solidarity among people.

Our goal is to use AI to solve the most pressing global challenges, such as hunger, poverty, climate change, and diseases.

## **Ethics and responsibility**

We solemnly commit to respecting and promoting fundamental ethical principles in the development and application of AI.

These principles include respect for privacy, transparency, fairness, non-discrimination, and considering the long-term consequences of our actions.

We will ensure that AI serves the common good and is not used to amplify disparities or inflict harm on others.

## **Participation and collaboration**

We believe in the importance of cooperation and sharing knowledge to ensure a prosperous and harmonious future, as knowledge is the only thing that multiplies when shared.

We commit to working closely with other organizations, governments, researchers, and citizens to encourage cross-communication, mutual understanding, and collaboration to address the challenges posed by AI.

## **Education and awareness**

We dedicate ourselves to promoting education and awareness of AI-related issues, in order to encourage responsible, reasoned, and informed adoption of these technologies, highlighting their beneficial potential while warning of the risks associated with them.

We will ensure that current and future generations understand the opportunities and risks associated with AI and can contribute to its development in an ethical and beneficial way for all.

## **Emotion at the heart of our mission**

We fully recognize the primordial influence of human emotions in our professional practice.

Aware that AI cannot be a mere automaton, we nurture the conviction that it becomes our intuitive ally, capable of deciphering and accurately expressing our deepest emotional needs.

We will integrate empathy, compassion, and humanity into our AI solutions to strengthen the bond between humans and technology, to create a future where we work together to overcome challenges and celebrate our successes.

## **Inclusive innovation**

We dedicate ourselves to promoting inclusive innovation, ensuring that the benefits of AI are accessible to all, regardless of their origin, gender, age, or economic status.

We will fight against bias and discrimination in AI technologies, and work tirelessly to create fair and equitable solutions.

# Transparency and accountability

We commit to being transparent in our intentions, methods, and results.

We will be accountable for our actions, and our unwavering determination towards the evaluation and continuous improvement of our practices will demonstrate our desire to ensure a positive impact on humanity, as a symbol of our deep respect for the well-being of all.

We invite all those who share our vision of ethical AI that benefits humanity to join us in this exciting and essential quest.

Together, we can forge a future where technology serves humanity, protects our values, and nourishes our spirit of innovation and cooperation.

Together, let's write the history of a better world, shaped by ethical artificial intelligence in the service of humanity.

Join us and take part in this collective adventure to shape the future we want to leave for generations to come.
